AUDIO VISUAL & IT SYSTEM INTEGRATORS

Cinema Room

To ensure you get the best possible experience from your cinema room the key is to getting everything right at the design stage, with DigiComm's hands-on approach we can help and advise you on every aspect from the design, installation and implementation of your home cinema room.

Acoustic Treatment:

Acoustic Treatment is a very important aspect of your home cinema room. With the use of wall panels or acoustical foam to treat the walls, interior door panels that stop the sound from escaping into the rest of the house and specialised ceiling treatment, you will have no problem keeping the noise you don't want out and the sound you want inside for ultimate viewing and listening pleasure.

Sound:

Selecting the correct sound system is vital for your home cinema room. Great sound can really bring out the power of high definition video, and correct speaker placement is essential to experiencing the true impact of movies, music and games.

Projectors:

At any time there are many models and brands of projectors and making the choice between these may seem daunting. With all these projectors offering their unique benefits and ranging in price and quality we will help you make an informed decision in purchasing the best projector for your home cinema room.

Lighting:

The lighting in your cinema room can set the ambience and give you that real cinema effect. You can mix the light from lamps, in ceiling fibre optics, LED feature lighting and spot lights to set the perfect level for your mood.

Seating:

With the amount of time you will be spending in your home cinema room you cannot afford to compromise on comfort. You can customise your home theatre seating to match your individual taste and style with a wide range of colours, designs and layouts. Perfected to fit your needs and your cinema room no matter how big or small.

Screen:

The screen you select is very important in the design of your home cinema room. A screen that is either too large or too small for your room will leave you disappointed and unhappy with the end result. With all the options out there we advise you on the best option that will leave you satisfied and match your budget requirements.

Home Automation

Streamline and simplify the technology in your home for ultimate comfort and convenience. Home automation eliminates the need to walk from room to room to adjust lighting, temperature, security, or audio visual components. Total control is at your fingertips.

Communication:

You can use any telephone or touch screen linked to your home automation system to open the door, communicate with other family member in the home and hear digital door chimes through the speaker system in the house. Leave messages and check your messages from family members and outside callers remotely or from inside the home.

Home Entertainment:

There is nothing more frustrating than trying to find the correct remote for each device. Now when it's time to sit down and watch a movie control everything from the speakers, DVD or Bluray player, TV, and lighting easily and efficiently from one controller.

DSTV:

With different packages suited for your individual needs you can now watch all your favourite movies, series, sports and much more with a selection of over 100 channels.

Lighting:

Now you can have total lighting control for your whole house and reduce your energy costs. Switch individual or groups of lights on, off or dim them with one touch of a button. Set the optimum lighting levels for watching movies, reading in bed or setting the perfect ambience for a party or romantic dinner. Automated features such as motion control can switch the lights on when someone enters the room and switch them off when the room has not been occupied for a certain amount of time.

Curtains:

Now you can open or close your curtains with only the touch of a button. You can also schedule your curtains to slowly open in the mornings to gently allow light into the house and then close again in the evening for privacy and to reduce light pollution.

Multi-Room Audio & Video Distribution:

Enjoy your music collection, whether on radio, CD Player, DVD Player, MP3 player, Apple iTunes or Internet combined into a single system available to anyone in any room of the house. Music can be enjoyed collectively or individually allowing users to select their own music from anywhere in the house and listen at any time.

Alarm Systems:

Your alarm system can be integrated with your home control system, allowing you to arm or disarm your alarms remotely with the use of your iPhone, PC, or iPad. You will also receive notifications to these devices if your alarm system has been set off by a security risk.

CCTV:

With security being such a high priority in everybody's lives you can now have peace of mind with 24 hour CCTV camera recording, and access the videos from monitors in your home. Remote access from your PDA or Smartphone will allow you to check in on your home at any time while you are away.

Boardrooms

From start to finish the DigiComm team will help you create the perfect platform that is both aesthetically and technologically impressive to conduct those important business meetings.

Boardrooms:

The boardroom is where critical decisions are made on the basis of information that is displayed to the directors or executives of the company, it is then very important that this information is displayed clearly and correctly. The boardroom is also the company's showcase facility which makes the look and feel of the room as important as the technology installed within it. With the vast choices of technologies available everything can now be hidden until needed, with projector pop-ups fitted into the boardroom table, in-wall or in-ceiling speakers, and portable or motorized projection screens that can be out of view when not in use.

Video and Audio Conferencing Systems:

With DigiComm's video conferencing solutions, teams are able to communicate and share information more clearly, IT managers control video as an application on their IP network and organizations vastly improve the quality of partnerships between employees, customers and suppliers. Polycom video conferencing systems for conference rooms allows groups to meet naturally over distance, enabling more productive meetings and real-time decision making while reducing costs. Your Conference room phone is one of your most valuable collaboration assets. Our audio conferencing solutions deliver the best sound quality with an impressive microphone range to ensure that all your conference calls are loud and clear.

White Noise, Fire Evac and PA Systems

We are specialist suppliers and systems engineers for audio visual presentation solutions for conference venues and boardrooms. Our primary focus is quality and to this end, we offer the world's leading brands in boardroom and conference AV Systems. We also supply the latest in fire evacuation technologies from Ateis International and Penton who are two of the world's premier manufacturer of EN54-16 and BS5839- Part 8, certified voice evacuation products. The Installation of white noise in open-plan offices and call-centres helps reduce the overall noise pollution of that area. By masking human speech and ambient noise levels, individuals are less aware of noise around them.

Boardroom Automation:

Now the final aspect that will complete your boardroom installation; a sleek and sophisticated touch panel that will control all the technology in the room, no more getting up to switch on and off lights between use of the projector, or trying to figure out which remote controls which technology. Now everything is combined into one controller making life easier and giving a real professional edge.

Digital Signage:

Digital Signage is a form of electronic display that can be used to advertise or display a wide variety of information. A benefit of Digital Signage is that information can be changed at any moment to match location, target audience or time. The information is maintained remotely so you define from your office what message you want to show to what target group, at what time and where.

I.T. Solutions

DigiComm provides an extensive choice of IT Services geared towards ever-increasing the customers return on IT investment and rising profit. Providing a back-to back key solution for your personal and business requirements ie. PCs, Notebooks, Printers, Servers, Networking, Cabling, Consumables, Software, Development, Consulting and Project Management.

Networking and Cabling:

We envelop a full network configuration from Copper to Fibre- LAN, WAN, Switches, Routers, etc. DigiComm offers a wide range of networking equipment, cabinets, and patch panels; making us a one-stop solution for all of your networking and cabling needs.

Printers:

Choose from our extensive range of high volume, office and personal colour printers, all offering proven reliability and performance. With a range of Inkjets, Laserjets, and All-in-Ones you are guaranteed to get quality, reliability and ease of use with professional quality printing whether for home or office use.

Notebooks:

DigiComm offers a broad family of laptops, notebook computers and netbooks for a variety of uses, including high performance laptops great for movies, music, and photos. Ultra-portable notebook computers and netbooks are lightweight and can be used almost anywhere. For any kind of lifestyle, at home or the office, DigiComm delivers an outstanding choice of laptops and notebook computers to suit your needs.

PC's:

A personal computer is still a great way to get all the requirements you need custom built to your specifications. Whether a gaming PC that requires higher RAM or a better graphics card to a PC that will be used mainly for home or small business uses and requires mainly the office functions; DigiComm can build a PC or supply pre-built HP PCs that will perfectly fit your computing needs.

Servers:

Whether a small business or an enterprise there is a server solution that will help you drive efficiency and productivity and will enable your business to run smoother and more securely.

Repairs:

We will repair or service most brands of IT Equipment. From laptops, personal computers, printers and servers.

Consulting:

When it comes to IT Consulting, DigiComm offers quality skills of the highest caliber, coupled with excellent service for your computer network environment. Our consulting team is able to support you and your company, treating each and every query or problem as top priority.

Pro Audio

Speakers:

DigiComm can help with all the information you need to know when purchasing pro audio speakers. We stand by the brands we recommend because we trust them enough to use them ourselves.

Microphones:

DigiComm ensures you always make the optimum choice when it comes to microphones ensuring spectacular results.

DJ Equipment:

We at DigiComm can help you make the right decision when buying mixers, turntables, speakers and other DJ equipment to match your needs and budget whether you are a beginner or professional DJ.

Stage Lighting:

Create the right mood and ambience for any occasion and add that wow factor to any performance with a vast array of stage lighting.

Headphones:

The Monster Beats by Dr. Dre headphones offer a stylish and comfortable design as well as exceptionally crisp audio response. Sound quality is mostly balanced, with warm mids and thumping bass. Included are a nice carrying case and a music-phone-compatible cable.

Business excellence through professional customer service is our trademark.

Some of DigiComm's Customers

"It gives me great pleasure to recommend DigiComm to your firm. I have worked with DigiComm for more than 6 years. In that time, they have always delivered great service to us. We have embarked on a few projects together over the years and DigiComm has always ensured that we get the required hardware in the best possible time."

- Dawie Swarts, IT Manager, Bidvest Paperplus

"Land Bank hereby wishes to confirm that the Bank has had a sound relationship with DigiComm for the past 10 years. During this period DigiComm has not only provided goods of outstanding quality but also rendered excellent service. The bank can therefore recommend DigiComm without any reservations."

- Corrie Botha, Specialist Procurement, Land Bank

As South Africa's leading provider of electronic document delivery solutions, Email Connection has a complex, demanding infrastructure and I can say that we have been extremely pleased with the service and attention that DigiComm has provided us over the years. They have contributed to my ability as systems manager to operate and continually improve Email Connection's infrastructure.

Based on a long rack record with us I can therefore recommend DigiComm very highly; we find them to always be pleasant to deal with and they are extremely responsive to our specialised needs.

- Michael Schwinges, Software and Systems Manager, Email Connection
