Euro

Bath & Tile

Live Life Better

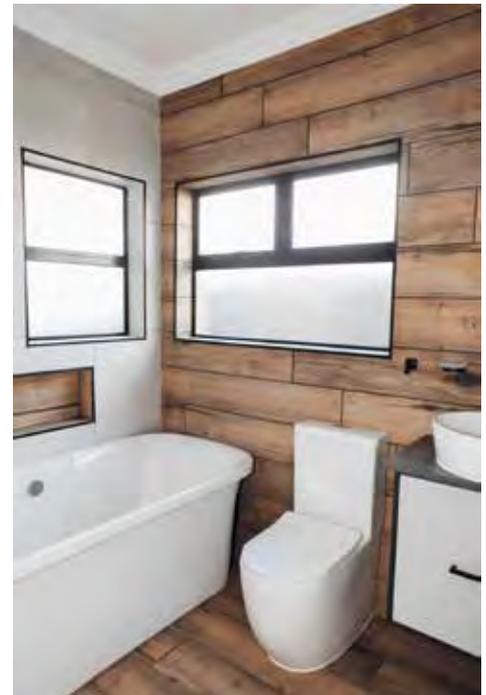

ABOUT US

The Company was established back in November 2002 as a small local family business in the farm town of Trichardt just 5km out of Secunda in Mpumalanga South Africa.

Euro Bath and Tile (Pty) Ltd initially started trading from a 155sqm store with a 220sqm warehouse, we later expanded into a regional business supplying clients over a 200km radius in and around the Mpumalanga province which incentivised the relocation to a 6040sqm store which currently operates as our head office, Today Euro Bath and Tile (Pty) Ltd is a Multi-National Store two additional branches in Edenvale (2014) and Centurion (2018) serving clients all over the country with notable clients in George, Durban, and Cape Town.

Our clientele reach extends all over sub-Saharan African countries like Botswana, Zimbabwe, Zambia, Mozambique, Angola, Malawi, Swaziland and Lesotho, with some clients as far as The DRC.

Euro Bath and Tile reserves the right to alter and/or remove designs from time to time without prior notice.

ATLAS PARAPLEGIC ASSISTED
MOBILITY LOW LEVEL WC SET

Toilet Specs

- Material: Vitreous China
- Horizontal outlet
- Easy Reach Side Flush Handle
- Low Level Raised Height Pan
- CE Compliant
- Traditional design
- Water saving Flush Mechanism
- **Seat not included**

Raised Height WCs are more comfortable and convenient to use because the toilet pans are taller in height. The extra 5cm-12cm in raised height means that it is easier and more comfortable to lower your body and sit on it. The extended height is really appreciated by wheelchair users, taller people, as well as by people that are frail, or, people who struggle with lower back pain.

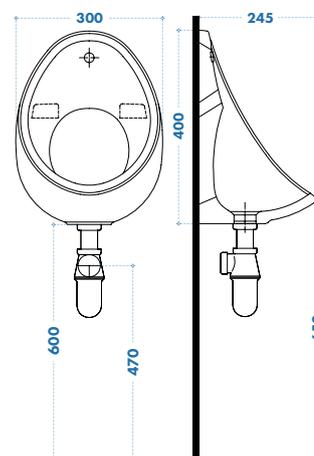

ATLBOXURIOT40BE

BS 40 URINAL

Pan Specs

- Rim-Free Pan For Better Hygiene
- Modern Compact Projection
- Material: Vitreous China
- Includes: TOP or BACK Entry Spreader
- Includes: Wall Brackets

TOILET INSTALLATION

Ensure plumbing is in correct position. Assemble all cistern fittings, inlet valve on side of cistern. Fit cistern to pan ensuring rubber sealing ring is in correct position and tighten bolts. NOTE: Do not use putty as sealer. Fit a flexible pan collar to the pan outlet and connect to sewer pipe. Apply thin layer of silicone sealant to floor and wall surfaces, place into position. Flush the water line. Fit the seat. Complete all plumbing connections and do flush test. Ensure correct water level is set & overflow is operating according to local by-laws and SABS specifications.

BACK-TO-WALL INSTALLATION

Prepare water inlet and outlet heights and ensure plumbing is in correct position. Attach brackets to the floor. Place pan into position to ensure that brackets are in correct position. Remove pan and apply thin layer of silicone sealant to floor surface. Place pan back into position and fix screw to the bracket. Flush the water line. Fit double flap seat. Complete all plumbing connections and test flush to ensure all connections are watertight.

WALL HUNG INSTALLATION

Determine pan height, prepare water inlet and outlet heights and adjust threaded rods to height of pan fixing holes. Fit floor bracket into recessed wall and floor, then complete brickwork. Alternatively complete brickwork then fit bolt-through-the-wall bracket. Threaded rods to protrude minimum 90mm from the finished wall surface. Place washers and nuts on the edge of threaded rods. Place pan into position. Locate slotted bushes on to rods, between back of pan and washer and nut. Tighten nuts. Flush the water line. Fit double flap seat. Complete all plumbing connections and test flush to ensure all connections are watertight. NOTE: Do not over tighten.

Always use silicone sealant or equivalent between the pan & the finished floor and wall surfaces for a secure & neat installation. NOTE: Warranty will not apply to any product installed with cement.

MAGNA 140

MAR05011

WALL HUNG | VANITY

1415 x 550 x (h) 165mm

BASIN INSTALLATION

Basin may be installed by alternative methods:

Option 1: Place basin level against wall surface at correct height and mark fixing hole positions. Remove basin and drill holes. Attach bolts to wall, fit basin and secure.

NOTE: Do not over tighten.

Option 2: Place basin on a vanity surface over pre-cut outlet hole. Fit waste and fasten nut under the vanity surface.

When mounted into a bathroom cabinet or vanity slab, ensure that the surface is level and secured firmly against the wall. Apply a liberal layer of silicone sealant or equivalent between the contact area of the surface and basin self-rimming surface. Place the basin into position and wipe off excess sealant and allow to dry.

The ONE Collection from Jensen Nordica is a carefully constructed product, made from grade 304 Stainless Steel. Available in a round /cylindrical finish (Circa) or in a square finish (Cube) The steel is polished to give a chrome like finish. No plating means no possibility of any flaking! Best of all, the stainless steel means you never have to worry about rust!

The SMART collection is a line of young faucets that complete the bathroom and kitchen furnishings with notes of simplicity and elegance. The flat and parallel surfaces of lever and mouth express a modern design, while the opening on the handle lightens and characterizes the whole series. In its simplicity, SMART can satisfy all bathroom compositions thanks to the different solutions of both built-in and countertop basin mixers, as well as multi-way mixers for bath and shower. Also the SMART proposal dedicated to kitchen stands out for its completeness, a wide range of options which is able to meet every need of price, functionality and aesthetics. Some kitchen mixers of the SMART line are also available in the version with integrated Touch-Me technology. Design by Cristian Mapelli
