

CORESOL

MULTI-SYSTEM INFRASTRUCTURE SPECIALIST

CUSTOM & COMPLETE SOLUTIONS

We orchestrate people, systems, and technology to transform fragmented infrastructure into seamless, high-performing environments. By combining deep technical expertise with a coordinated, turnkey approach across the full project lifecycle, we reduce complexity, improve reliability, and deliver infrastructure built for performance, resilience, and future growth.

CRITICAL INFRASTRUCTURE & CONNECTIVITY

DATA CENTRE & CRITICAL SYSTEMS

SECURE & INTELLIGENT ENVIRONMENTS

NETWORKED & CONNECTED OPERATIONS

DIGITAL SIGNAGE & SMART ENVIRONMENTS

MANAGED SERVICES & ONGOING SUPPORT

INFRASTRUCTURE THAT WORKS AS ONE ORCHESTRATED FROM DESIGN TO DELIVERY.

In complex environments, infrastructure cannot operate in isolation. Power, security, networks, and systems must function as one coordinated ecosystem. Coresol takes responsibility for the full picture, orchestrating every layer of infrastructure from design through implementation and operation. By aligning systems, managing dependencies, and reducing risk, we ensure environments perform reliably today while remaining ready for the future.

Coresol is a turnkey infrastructure solutions partner specialising in multi-system environments where performance, reliability, and coordination are critical.

Our expertise spans data centre infrastructure, power systems, network infrastructure, electronic security, and integrated building technologies. By bringing these disciplines together under a single coordinated delivery model, we remove the complexity that often arises when multiple vendors and systems intersect.

With highly skilled engineers across hospitality, commercial, retail, and mission-critical environments, our team understands the operational realities behind infrastructure decisions. Through an orchestration-led methodology, we coordinate stakeholders, vendors, and technology layers from the earliest stages of a project through commissioning and long-term operation.

As part of the Agera Group, Coresol extends its capabilities even further, integrating seamlessly with complementary networking, managed services, and technology solutions. This allows clients to work with one trusted partner capable of delivering cohesive infrastructure solutions across multiple disciplines.

For organisations operating in complex environments where failure is not an option, Coresol provides the clarity, accountability, and expertise required to deliver infrastructure that works as one.

 CORESOL

A PROUD MEMBER OF THE AG AGERA GROUP

WHY?

CONFIDENCE

IN COMPLEX ENVIRONMENTS

Complex infrastructure introduces risk when systems are fragmented or poorly coordinated. Coresol removes that risk by orchestrating every element of a project so systems work together seamlessly. Our clients gain confidence that infrastructure will perform reliably, scale effectively, and support operational continuity.

BUILT

FOR COMPLEXITY

Many infrastructure providers focus on individual systems. Coresol is built for environments where multiple systems must interact flawlessly. By understanding the relationships between data, power, security, networking, and control systems, we design and deliver solutions specifically engineered for complex, multi-system environments.

ONE

ACCOUNTABLE PARTNER

Coordinating multiple vendors and disciplines introduces uncertainty and risk. Coresol acts as the single accountable partner responsible for orchestrating the full infrastructure environment. From design and coordination through installation, commissioning, and support, we ensure every element works together as intended.

END-TO-END

OWNERSHIP

Infrastructure decisions made during design affect performance for years to come. Coresol takes ownership across the full lifecycle of a project. Our teams coordinate every phase, ensuring that infrastructure is designed with operational reality in mind and delivered with long-term performance at its core.

POWERED

BY THE AGERA ECOSYSTEM

Through our alignment with the Agera Group, Coresol clients gain access to a broader ecosystem of technology expertise. Networking, managed IT services, audio-visual technologies, and infrastructure solutions can be integrated into one cohesive environment, delivered through a single trusted partner.
